GERMAIN’S EXCITING 1956 ROSE INTRODUCTION

Rose Marie Reid

NEW Dawn Pink Color—NEVER CAPTURED IN A ROSE BEFORE

Rose Marie Reid is an exceptionally tall, vigorous growing Hybrid Tea Rose which bears large quantities of very double flowers.

The beautifully shaped buds—long and full—open to a breathtaking dawn-pink never captured in a rose before. These long lasting flowers measure five to six inches across, and have 45 to 50 petals softly rolled back at the edges to give a rich effect.

Its exquisite blooms are set off majestically by deep green, heavily textured, leathery foliage. The bush has exceptional vigor and remarkable disease resistance, insuring an earlier blooming and a healthier, more luxuriant growth all season long. The blooms make gorgeous cut flowers because of exceptionally long stems.

Rose Marie Reid is another triumph of the gifted Milton Whisler, head of Germain’s Rose Research Department. Among former outstanding Whisler creations are Easter Parade, Sun Valley, Candleglow, Amigo, and the climbing San Fernando.

Rose Marie Reid can boast of two of the most illustrious parents in rose history—Charlotte Armstrong and Katherine T. Marshall—both being of All America Vintage.

Be the first in your neighborhood to have this NEW rose sensation.

AMERICA'S FIRST TRULY RED ROSE

The CHRYSLER IMPERIAL ROSE is unmatched by any other red rose. Its vivid, rich tones of crimson are enhanced by darker overtones of glowing oxblood red, and the gem-like lustre of garnet in the folds retains its sparkling beauty.

Long, tapering buds unfold even in adverse weather, opening to large, high centered flowers measuring 4½ to 5 inches with 40 and 50 wide petals. These are borne on sturdy, medium long stems. The opening of each rose is a thrilling spectacle of changing, iridescent shades of red.

The flowers are very sweetly scented with true rose fragrance.

In growth, Chrysler Imperial Rose is compact, and symmetrical. Its abundant, dark green, semi-glossy, disease resistant foliage gives the bush the appearance of a handsome garden shrub.

Germain’s SENSATIONAL—NEW

Kolorcoat® DICHONDRA

Deep, Rich Green All Year
Resists Rough Usage
Requires No Mowing
Forms Dense Turf
Thrive in Sun and Shade

Dichondra is a low-growing American plant, native to the southeastern part of the United States, from Virginia south. It is known botanically as Dichondra Repens or D. Repens var. Carolinensis.

Germain’s Kolorcoat Dichondra makes a dense sod by means of runner-like stems, growing very close to the ground, but never forms a thick mat like bermuda grass. The kidney-shaped leaves, about 1/8 in. wide, and seldom for 1/2 in. tall have a rich, dark velvety-green color. Dichondra is tough in texture and hard usage will not injure the strong turf or mar its beautiful appearance.

In mild climates dichondra can be started any time of the year. Since summer is the best growing season for dichondra spring or early summer planting gives quickest results. When planting during the colder months a nurse crop is suggested.

In the East or Middle West we recommend spring or early summer planting. This allows enough time to develop a strong root system for the plants to make seed. When the foliage and top growth is hurt by rigorous weather the lawn will then renew itself from the roots and self-sewn seeds.
